

Ariprasath N

Software Engineer | Experience: 2.6 Yrs

Career Objective

Currently working as a Software Engineer at TestYantra Software Solutions, I am seeking a challenging role where I can apply my skills and contribute to the growth of the organization while achieving professional development and job satisfaction.

Technical Skill Set

Languages	Java 8+, SQL, NoSQL
Frameworks/Libraries	Hibernate 7 with JPA, Spring, Spring Boot, Spring Data JPA, Razor Pay
RDBMS Applications	MySQL 8.0.30, Postgres
NoSQL Database	MongoDB
Messaging and Streaming	Apache Kafka, RabbitMQ
Design Patterns	Singleton, Model View Controller (MVC), Factory Pattern, DTO, DAO, Builder Pattern
Logging API	Log4j, Slf4j, ELK Stack (Elasticsearch, Logstash, Kibana)
Monitoring	Prometheus, Grafana, Spring Boot Admin
Unit Testing	Junit5 with Mockito
API Documentation	Swagger API, Postman
Code Quality Tools	Sonar Lint, SonarQube
Web Servers	Apache Tomcat
Version Control System	Git with GitLab
Build Automation Tool	Maven, Gradel
Other Tools	IntelliJ, Eclipse, Visual Studio Code, MySQL Workbench, PostgreSQL
Software Development Processes (SDLC)	Agile Methodology
Project Architecture	Monolithic, Micro services

Project Details

TRITON – Web Application Development

Client: Vivriti Capital | Domain: Finance | Duration: March 2024 – Ongoing

Project Description:

Triton is a Supply Chain Finance platform that provides a digital solution for managing end-to-end financing workflows. It enables suppliers to receive early payments and buyers to optimize working capital efficiently. The platform integrates with ERP systems, payment gateways, and banking APIs to ensure seamless financial operations. With a service-oriented architecture, Triton provides scalable and secure backend services, automating compliance-related workflows like GST and EPFO calculation while maintaining high availability and performance.

- Technologies:
- Backend: Java, Spring Boot, Spring Data JPA
 - Database: MySQL
 - Architecture: Microservice
 - Tools: Postman, IntelliJ IDEA, Maven

- **Others:** Swagger, JUnit5, Mockito, Jenkins

Roles and Responsibilities:

As a Backend Developer, I was responsible for:

- Developing and maintaining backend services for the **Corporistory module** in Triton LOS.
- Integrating third-party APIs (GST, EPFO, CIBIL) through **API Tower**, enabling automated compliance and credit evaluation workflows.
- Implementing business logic for validating and processing **loan eligibility** using GST, EPFO, and CIBIL data.
- Designing and optimizing **database models** using Spring Data JPA for efficient query execution.
- Writing **unit and integration tests (JUnit5, Mockito)** to ensure system reliability and supporting CI/CD pipeline stability.
- Enhancing API response handling and optimizing query execution, improving performance and reducing latency.
- Documenting RESTful APIs using **Swagger** for seamless collaboration with frontend and QA teams.
- Ensuring **secure and fault-tolerant API communication** with proper validation and exception handling.
- Participating in **Agile ceremonies** (standups, sprint planning, retrospectives) to align deliverables with business goals.

Saarathi – Loan Origination System

Client: Cars24 | **Domain:** Finance | **Duration:** April 2023 – February 2024

Project Description:

Saarathi is a digital lending platform enabling customers to apply for used car loans, top-up loans, and loans against cars with the help of agents. It streamlines loan origination through automated workflows, document handling, and integration with third-party financial services. The system supports real-time loan tracking, personalized offers, and secure data management, improving customer experience and ensuring compliance with financial regulations.

Technologies:

- **Backend:** Java, Spring Data JPA
- **Database:** MySQL, MongoDB
- **Design Patterns:** Strategy, Builder, Factory
- **Tools:** Confluence, GitLab, Jenkins, SonarQube, Grafana, Datadog

Roles and Responsibilities:

As a Backend Developer, I was responsible for:

- Designing and developing **RESTful APIs** for the Credit Service, handling CIBIL pulls, fraud checks, and loan eligibility workflows.
- Implementing **Strategy and Factory patterns** to simplify dynamic credit decision-making and rule execution.
- Building and maintaining the **Integration Coordinator Service** to orchestrate external API interactions (CIBIL, partner systems) with retry and timeout handling.
- Optimizing **MySQL queries** and introducing **asynchronous processing**, reducing API response time and improving throughput.
- Implementing **Dead Letter Queue (DLQ)** for failed API/webhook event handling, ensuring data consistency and reliability.
- Writing **unit tests with JUnit & Mockito** and maintaining **SonarQube standards** for clean and maintainable code.
- Creating **API documentation (Swagger, Postman)** and maintaining technical diagrams in Confluence for cross-team understanding.
- Supporting production systems by analysing logs in **Grafana/Datadog**, resolving issues, and ensuring SLA compliance.
